Detailed functional specifications

eZ ShareNetwork

Change history

Version	Date of creation	Updated by	Description
1.0.0	2012-01-01	Adrien Loyant	Creation of document

1. AIM

This document provides some information in order to use "eZ ShareNetwork" extension.

2. ACTIVATE EXTENSION FOR TEMPLATING

1.1 Activate social bar

To activate the social network bar you just can edit the ezsharenetwork.ini file and set the parameter "social_share" of the section "social_share" to "enable".

```
[social_share]
social_share=enabled
```

1.2 Choose social bar

Then, you need to choose which one of "**addthis**" or "**sharethis**" you want to use for social networking.

```
[social_share]
social_share_network=addthis
```

1.3 Additional features

For addthis tools, you can specify if you want to use the default templating or a custom button image. To do this change the value of "templating" constant to "custom"

```
[social_share]
templating=custom
```

Then push your custom image to an ezimage folder in a subdirectory call "social", with the name of the social button as the image, and the ".png" file extension.
For example, if you want to customize the linkedin button, push an image called "linkedin.png" into the
/extension/ezsharenetwork/design/ezsharenetwork/images/social/linkedin.png.

Note: All addthis services are listed here: *http://www.addthis.com/services/list*

3. CUSTOM FEATURES FOR ADDTHIS

You can specify all specific *addthis* features define in the addthis.ini config file. Just take a look into the file provided and change all things you want.
For example to set the addthis publisher id change the value of "addthis_config[pubid]" into the "config" section.

```
[config]
addthis_config[pubid]=my-publisher-id
```

Note: All api constant are listed here: *https://www.addthis.com/help/client-api*

4. CUSTOM FEATURES FOR SHARETHIS

You can specify all specific *sharethis* features define in the sharethis.ini config file. Just take a look into the file provided and change all things you want.
For example to set the sharethis publisher id change the value of "publisher" into the "options" section.

```
[options]
publisher=my-publisher-id
```

Note: All api constant links are listed in the ini config file.

5. DISPLAY SOCIAL BAR IN A TEMPLATE

To show the social bar in a custom template just use normal include ez method.

```
{include uri='design:social_network.tpl'}
```
